ADVISORY SERVICE:
AUTOMATION
& DEVOPS WORKSHOPS

Information technology is transforming faster than it has at any other time in history. Organizations no longer consider IT as a cost of doing business; they're now looking to it for ways to stay more competitive. And, revenue generation has become one of their primary KPIs.

GDT's Advisory Services professionals understand these demands through the empirical experience that comes from working with some of the most notable service providers, government agencies and enterprises in the world. Their consultative approach carefully analyzes customers' processes, including goals and objectives, methodologies—including deltas between their current and desired state—and strategies that will accelerate and enable them to gain more agility and visibility, while reducing risk.

GDT DEVOPS AUTOMATION WORKSHOPS

GDT's Automation and DevOps Workshops guide customers on an automation journey to deliver a DevOps practice that will help shape and transform their organization for years to come. Starting with the introductory workshop, customers are introduced to Automation and DevOps best practices, ITSM/ITOM Automations, Infrastructure as Code (IaC), advanced CI/CD, automated testing, and much more, that will culminate in POV (Proof of Value) development and deployment.

The workshops are perfect for Developers, System Administrators, Network Administrators, Managers, or anybody exposed to, or responsible for, automating IT services though DevOps Development. Attendees will be able to release software faster and address issues more rapidly. In addition, they'll be able to develop and deploy high-level roadmaps

INTRODUCTORY TRAINING ENABLEMENT (2 DAYS)	ADVANCED HANDS-ON TRAINING ENABLEMENT (4 DAYS)	ADVISORY ASSESSMENT & ROADMAP STRATEGY (10 DAYS)	ADVISORY ASSESSMENT & STRATEGY POV BUILD (15 DAYS)
Attendees will gain an understanding of DevOps Best Practices, Infrastructure as Code (IaC), automated testing, advanced CI/CD and hybrid IT strategies.	Attendees will build on their DevOps knowledge by digging deeper into Advanced CI/CD Cloud Platforms, hybrid IT strategies and containers.	Hands-on practice in advanced labs and learn how to assess application teams and walk away with application modernization recommendations.	Construct and complete a Proof of Value (POV) build, including its deployment. Included are assessments conducted by GDT's DevOps advisory team.
