

# STAGING AND IMPLEMENTATION SERVICES

The most comprehensive, national Staging and Implementation as a Service available in the market

## About GDT Staging and Implementation Services

GDT Staging and Implementation Services reduce your network and data center deployment risk and accelerates the adoption of new technologies. Our automation platform facilitates ease of configuration standardization, quality, and scalability.

Our staging facility, which is integrated with our warehouse facilities, supports all major vendor technologies and allows us to execute a consistent set of processes, reducing deployment times, risk, and ensuring end-to-end quality for a seamless experience.

## OUR SERVICES

Supporting leading technologies and configurations across OEM's

### Staging and Implementation Highlights

- Leverage **Integration Center** automation platform, no need for device configuration at your site
- **Comprehensive** engineering support across a wide array of technical solutions spanning product and software
- **Purpose-built** device automation to increase scalability, shorter time to deploy while maintaining quality and asset control
- **Supports** cabinet bracing, shock pallets and white glove deliveries
- **Core capability** includes kitting, asset tagging, rack/stack roll, physical hardware configuration, device burn in, software/firmware upgrades, device hardening, and RMA/DOA processing with OEM's
- **Flexible** client access to devices and configurations (e.g. VPN)
- **Secure, climate-controlled facility** with access controls, fire, intrusion and environmental alarms
- **Experienced** on-site engineering teams leading the installations

## WHY CHOOSE GDT

**Committed to quality**

**White glove approach**

**Secure integrated systems**

**Automation Capabilities**

**We partner with you**
