

# The secure IT integration & divestiture checklist

Your guide to security before, during, and after major business transactions

Use this checklist to uncover critical **security considerations for data center resiliency** and risk management at every phase during mergers, acquisitions, and/or divestitures (M&A/D).

## BEFORE

### Pre-transaction due diligence

Assess security postures across the following areas to drive robust, secure integration plans:

- ☐ Network security
- ☐ Application
- ☐ Data security
- ☐ Compliance

## DURING

### Protection for sensitive data

Take the following steps to prioritize data protection to foster trust and avoid regulatory issues:

- ☐ Data classification
- ☐ Data compliance
- ☐ Secure data transfer

### Proactive threat mitigation

Have a response plan and risk mitigation strategy in place for common cyberthreats:

- ☐ Phishing attacks
- ☐ Insider threats
- ☐ Malware and ransomware

## AFTER

### Post-transaction integration challenges

Plan and execute carefully to prevent security lapses due to the following challenges:

- ☐ Merging systems
- ☐ Harmonizing security policies
- ☐ Communication security
- ☐ Business continuity

### Post-transaction security

Maintain a secure environment and adapt to changing threats using the following strategies:

- ☐ Continuous monitoring
- ☐ Security protocol updates
- ☐ Employee security training
- ☐ Regular security audits

### Start-to-finish security expertise

Safeguard your M&A/D activities now and into the future by partnering with a security expert who can help you:

- ☒ Review capabilities and limitations.
- ☒ Assess existing risks and gaps.
- ☒ Define short- and long-term security goals.
- ☒ Ensure compliance and risk mitigation.
- ☒ Respond and recover quickly.

Assess your cyber resilience with a complimentary data center workshop from GDT.
